

Constitutional Intelligence Operating System

Control Layer for Multi-Agent Revenue Systems

Bringing discovery, CRM, compliance, governance, and realtime into one operating plane.

Prepared for enterprise stakeholders and strategic partners.

Platform Capabilities

- CRM intelligence with fit and intent scoring for account prioritization.
- Compliance policy center with retention controls and audit visibility.
- Source discovery governance to approve high-value legal data surfaces.
- Realtime telemetry pipeline for operational trust and incident awareness.

All modules run through a constitutional reasoning and traceable decision model.

Delivery Model and Security Posture

Phase 1: Foundation rollout, API contracts, and baseline governance.

Phase 2: Domain expansion with flow callbacks, approvals, and observability.

Phase 3: Production scale hardening with reliability SLO and audit discipline.

Security Controls

- JWT authorization for protected routes and role-gated operations.
- Idempotency and rate limiting guardrails for write-heavy endpoints.
- Signed callback verification and auditable event envelope standards.

Commercial Model

Starter: validation teams bootstrapping AI-led pipeline operations.

Pro: growth teams standardizing governance and compliance execution.

Business: enterprise custom controls, onboarding, and SLA packages.
